About Northeast Wildflower Seed Mix

23 Varieties

FEATURED
Best Seller, Eden Exclusive

The Northeast Wildflower Seed Mix is a must-have for gardeners in the northeastern United States, from Maine down to Maryland. It contains a total of 23 easy-to-grow annual and perennial favorites that are perfectly suited for the region including Wild Cosmos, Coreopsis, Gloriosa Daisy, Blanketflower and so many more. The mix features annual and perennial wildflowers. The Northeast mix is hard working and will produce a gorgeous display of colorful blooms without needing much of your attention or time. Once you've prepared your soil and sowed the seed, Mother Nature will guide the way! You can expect to receive 100% pure seed with zero fillers. Many of the varieties are pollinators and will attract birds, bees and butterflies to your landscape.

This item may be considered invasive in specific areas of the USA. Please check with your local agricultural office for more information.

**SEEDS PROVIDED
BY
HULMEVILLE BOROUGH
STORMWATER COMMITTEE**

1 CHOOSE YOUR **SEASON**

SPRING
(Most Common)

SUMMER
(Cooler Zones Only!)

FALL
(Good for Perennials)

2 CHOOSE YOUR **SITE**

 **Average Sunlight**
(Most wildflowers prefer full sun)

 **Soil Quality**
(Wildflowers will sprout in all but the most difficult conditions)

 **Water Accessibility**
(A steady watering source is helpful, but not always necessary)

3 DETERMINE YOUR **COVERAGE**

We generally recommend one standard seeding rate for all wildflower mixtures. See next image for our recommended coverage chart.

4 PREPARE THE **SOIL**

 By Hand -or-  Roto-Tiller

5 SOW YOUR **SEED!**

 **Hand-Broadcast Method**
(for smaller jobs)

 **Rotary or "Cyclone" Seeder**
(for larger jobs)

After sowing, we recommend that you lightly compress your seeds into the soil - **no more than a 1/2 inch** - to protect them from birds, wind disbursement, etc. The key is to compress them, but not bury them.

RECOMMENDED **COVERAGE CHART**

If there's one thing we've learned after almost three decades of consulting with wildflower gardeners, it's that there is no perfect answer for how much seed is required to create the perfect wildflower meadow. The reason for this, of course, is that each "wild" gardener has his or her own particular ideas about how a meadow should look. Though some choose to create a sparse "meadowy" look, most others prefer a denser stand of wildflowers that will dazzle and delight at bloom time.

We generally recommend one standard seeding rate for all wildflower mixtures:

AMOUNT	RECOMMENDED COVERAGE	EXAMPLE SIZE
Ounce	Up to 250 square feet	A Master Bedroom
1/4 Pound	250-500 square feet	A Living Room
1 Pound	500-1,000 square feet	A Suburban Front Yard
5 Pounds	5,000-10,000 square feet	Up to about 1/4 Acre
10 Pounds	10,000-20,000 square feet	Up to about 1/2 Acre
25 Pounds	20,000-50,000 square feet	Ample Coverage of 1 Acre
50 Pounds	50,000-100,000 square feet	Ample Coverage up to 2 Acres
